Note asupra metodei de calcul:	Standar minimal CNATDCU	Realizat
1. Va fi luat în considerare Indexul Hirsch calculat utilizând ISI Web of Science, Core Collection, Thomson Reuters, pentru întreaga carieră a candidatului ("all years").	6	6
2. O revistă cotate ISI este o revistă pentru care Thomson Reuters calculează și publică factorul de impact în "Journal Citation Reports".		
3. Număr articole cu autor principal (autorul sau autorii principali ai unei publicații se consideră a fi oricare dintre următorii: primul autor; autorul corespondent; alți autori, a căror contribuție este indicată explicit în cadrul publicației a fi egală cu contribuția primului autor sau a autorului corespondent; ultimul autor).	10	13

4. Factorul cumulat de impact va fi calculat pentru articolele la care candidatul este autor principal (FCIAP). FCIAP = suma factorilor de impact ai articolelor publicate de autor în calitate de autor principal în reviste cotate ISI.	10.00	37.546
5. Număr articole coautor (alte articole publicate în reviste cotate ISI pentru care Thomson Reuters calculează și publică factorul de impact în "Journal Citation Reports").	5	10
